

Previous Timeline

- Databases ready to be used, how things need to be connected in order to work (Week - Done(I think))
- Setting up product page so that it saves selections into the cart (11/15 - 11/24)
- Making sure cart moves into the checkout section (11/29 - 12/10)

New Timeline

- Understand how to transfer information (11/24-11/29)
- Implement knowledge onto my project (11/29-12/10)

Update

According to my timeline I am sort of off of where I said I wanted to be. I was extremely overwhelmed with how many options and little aspects that went into building a shopping website. I decided on ASP and I have now been looking into this website (see link below) and following along with their tutorial in hopes that I will be able to gather enough information to apply this more towards what I want my shopping website to be like. So far this has been helping and I leaned into doing this as I've noticed how much I am struggling to get everything done with how many other classes I have to do. Plus searching for solutions to problems has been taking me long enough on its own. I feel like I'm getting somewhere....
